Date

Dell Technologies Conflict Minerals Report

Introduction

This Conflict Minerals Report for Dell Technologies Inc. (individually and together with its consolidated subsidiaries, “Dell” or “we,” “us,” and “our”) is filed with the Securities and Exchange Commission (the “SEC”) as an exhibit to Dell’s Form SD pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”) for the reporting year ended December 31, 2020 (the “Reporting Period”). The Rule imposes disclosure of certain due diligence and reporting obligations on SEC reporting companies whose manufactured products or products contracted to be manufactured contain “conflict minerals” that are necessary to the functionality or production of Dell products. The Rule defines “conflict minerals” as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives limited to tin, tantalum, tungsten, and gold, also referred to as “3TG.”

Dell Products Covered by this Report

This Report relates to products: (i) for which conflict minerals are necessary to the functionality or production of such products; (ii) that were manufactured, or contracted to be manufactured, by Dell; and (iii) for which the manufacture was completed during the Reporting Period (the “Covered Products”). The Covered Products include the following product categories manufactured or contracted to be manufactured by Dell in the Reporting Period: branded hardware, such as desktop PCs, notebooks and tablets; branded and third-party peripherals, such as monitors and projectors; and server, storage and networking products.

Overview of Dell’s Conflict Minerals Program

As part of Dell’s global approach to ensure responsible sourcing of minerals, Dell supports and respects the protection of internationally proclaimed human rights of all people, including the basic human rights of our employees and workers within our supply chain.

Dell manufactures and contracts to manufacture products for which 3TG minerals are necessary to their functionality or production. As a manufacturer of technology products, Dell does not purchase 3TG directly from mines, smelters, or refiners, but does purchase components and materials that may contain 3TG.

Therefore, Dell collaborates with suppliers, industry peers, and other stakeholders to meet program goals and customer expectations. In order to comply with the Rule, Dell conducts a good-faith Reasonable Country of Origin Inquiry to determine whether any necessary 3TG contained in the Covered Products originated in the Democratic Republic of the Congo (the “DRC”), the Republic of the Congo, the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia, or Angola (together, the “Covered Countries”), or were from recycled or scrap sources.

Dell’s due diligence process is designed to align with the five-step due diligence framework set forth in the Organisation for Economic Co-operation and Development’s “Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3rd Edition (2016)” and the related Supplements for 3TG (the “OECD framework”).

We participate in multi-stakeholder initiatives such as the Responsible Minerals Initiative (“RMI”). The RMI provides tools such as the Conflict Minerals Reporting Template (“CMRT”) and oversees the Responsible Minerals Assurance Process (“RMAP”), which verifies that sourcing practices are aligned to the OECD framework. We use these tools, RMI guidance, and the OECD framework to conduct due diligence on our 3TG supply chain and drive our minerals sourcing actions towards the goals established at the beginning of the Reporting Period. This includes a 100 percent CMRT response rate by in-scope suppliers and increasing the number of smelters and refiners participating in RMAP. Our work to increase the number of smelters and refiners (“SORs”) participating in RMAP resulted in the designation of 82 percent of all smelters and refiners reported in Dell’s supply chain as conformant¹.

¹ In addition to RMAP Active and/or Conformant status, Dell includes smelters / refiners with equivalent assurance (London Bullion Market Association (“LBMA”) Certified) as well as sites designated as 100% recyclers (to promote the fundamental sustainable nature of such operations).

Reasonable Country of Origin Inquiry

Deploying a CMRT survey to relevant suppliers, conducting a smelter and refiner review, and considering other third-party data constituted the Reasonable Country of Origin Inquiry (“RCOI”). This RCOI, combined with our risk assessment and mitigation efforts described in this report, represent Dell’s efforts to trace the source of 3TG in our supply chain to country of origin and the mine or location of origin as necessary.

On the basis of the responses to the RCOI, Dell performed further due diligence on 3TG contained in Covered Products that may originate from SORs known to source from Covered Countries and SORs that may source from Covered Countries.

Dell’s goal is to not purchase 3TG whose sale directly or indirectly finance armed conflict or contribute to human rights violations. Of the 312 unique smelters and refiners reported to Dell by our suppliers, 257 either are participating in RMAP, are LBMA certified or derive 100% from recycled or scrap sources.

Of those 312 smelters and refiners, 45 are known to be sourcing from the Covered Countries, and all are designated as “RMAP Conformant.” Dell continues to work with suppliers throughout its supply chain to assess and improve their information, reporting quality, and capacity, considering supply chain fluctuations and other changes in status or scope and relationships over time.

Due Diligence Process

Design of Due Diligence Measures

Dell’s due diligence measures have been designed to conform, in all material respects, with the OECD framework.

Dell’s due diligence included the following elements of the OECD framework:

Step 1: Establish strong company management system

Step 2: Identify and assess risks in the supply chain

Step 3: Design and implement a strategy to respond to identified risks

Step 4: Carry out independent third-party audits of supply chain due diligence at identified points in the supply chain

Step 5: Report on supply chain due diligence.

Due Diligence Performed

Step 1: Establish Strong Company Management System

Dell has established a management system to determine 3TG source and chain of custody in its supply chain.

Responsible Sourcing Policy. Dell’s Responsible Sourcing Policy outlines a collaborative approach to addressing concerns about the risk of human rights violations in the upstream supply chain. The policy states our expectations for suppliers to have policies and due diligence practices in place to reasonably assure that products and components supplied to Dell are not sourced from conflict mines.

Dell abides by, and is held accountable to, the Responsible Business Alliance (RBA) Code of Conduct and Dell’s Supplier Principles, which require direct material suppliers to maintain a conflict minerals policy and conduct due diligence on the source and chain of custody of materials in their products to reasonably assure they do not come from conflict sources.

Control System. Dell surveys its supply chain annually using the Conflict Minerals Reporting Template. This survey is the primary mechanism for identifying smelters and refiners that supply 3TG to components within the supply chain and assessing the risks associated with 3TG. Following the collection of smelter and refiner data from suppliers, Dell uses the RMI’s RMAP (and, as applicable, the LBMA’s equivalent scheme) to gain initial insights into whether the smelter is participating in RMAP and to determine the country of origin of 3TG for the smelters and refiners in our supply chain.

Supplier Engagement. Responsible sourcing is embedded in Dell’s supply chain management business processes. In addition to reviewing each CMRT received for completeness and communicating and following any required actions, we incorporate metrics on suppliers’ adherence to Dell’s expectations in quarterly scorecards used in executive business reviews communicated to suppliers alongside other measures of core supply chain performance (quality,

cost and availability).

Internal Team. Dell has a team of individuals dedicated to Responsible Sourcing management. These individuals work closely with other supply chain teams, such as Procurement and Engineering, to collect data from suppliers – and work with them in the event of errors or non-compliance. Performance is regularly communicated to these groups via monthly reports and individual escalation protocols.

The team members report to the Vice President for Supply Chain Assurance, with alignment and approval for policies, supplier requirements, communications and risk management addressed in the quarterly Social and Environmental Responsibility (SER) Steering Committee, consisting of the supply chain leadership team. Public reporting is subject to verification and approval from core functions, such as Legal and Corporate Social Responsibility, with final approval residing with the Chief Supply Officer.

Grievance Mechanism. Dell maintains grievance reporting processes for internal and external parties to report supply chain concerns. Grievance reports, including those related to responsible sourcing of minerals, can be made either directly to Dell or through Dell's ethics hotline (accessible via telephone or web) managed by a third-party provider. This provider receives such reports and directs them to the appropriate Dell contact for investigation. Information about these reporting channels is included in Dell's Code of Conduct, and in mandatory annual employee Code of Conduct training.

The web site <http://dell-ethicsline.com> provides comprehensive information, including local phone numbers for every country. Anonymous reports can be submitted by telephone or online. Additionally, parties can contact the Dell Ethics & Compliance Office via ethics@dell.com (in a reporting process that is not anonymous).

Dell also encourages the use of the RMI's Grievance Mechanism for mineral supply chain issues. Anonymous submissions can be made at www.mineralsgrievanceplatform.org.

Dell maintains an anti-retaliation policy that encourages team members to promptly report a potential or actual violation of applicable laws, regulations, and Dell policies or suspected unethical, illegal, or suspicious behavior. Retaliation against anyone reporting concerns or assisting with an investigation or audit in good faith, is prohibited. Team members suspecting they are subject to retaliation are encouraged to report using available channels.

Step 2: Identify and Assess Risks in the Supply Chain

A supplier is identified in scope for Dell's Conflict Minerals Program if it meets one or more of the following criteria:

- supplies components to Dell that are known to, or could potentially, contain 3TG;
- collects a specified percentage of Dell spend ; or
- is considered high-risk for benefiting armed groups in the Covered Countries based on previously reported data.

Dell requests CMRTs from in-scope suppliers and expects them to disseminate this reporting requirement throughout the supply chain. Dell requires suppliers to provide comprehensive, accurate data on 3TG acquired from their supply chain through the CMRT process. This data is used to identify and verify the smelters and refiners in our supply chain that participate in RMAP (or, as applicable, the LBMA's equivalent scheme). Collected CMRTs are analyzed to ensure conformity with Dell's assessment.

Dell partners with a third-party software provider to manage the CMRT reporting campaign, enabling initial data validation (to ensure survey completeness), followed by a more in-depth review using internally-developed risk assessment criteria. These criteria evaluate the smelters and refiner identified as being in Dell's supply chain and assesses the supplier's due diligence undertaken and other aspects of the supplier's program (including existence of a conflict minerals policy and use of CMRT).

Step 3: Design and Implement a Strategy to Respond to Identified Risks

Dell is committed to promoting responsible sourcing through third-party verification of smelters and refiners. Suppliers are required to progress towards the use of responsibly operated smelters and refiners, as designated to be conformant by RMAP or equivalent certifications, or to encourage the use of 3TG minerals 100% from recycled or scrap sources.

In promoting the use of operations whose commitment to responsibly is externally certified, Dell recognizes there are

smelters or refiners who do not align to these expectations or are unwilling to undergo a third-party audit. Alternatively, external factors may cause a smelter or refiner to lose RMAP Conformant status.

Accordingly, Dell's due diligence draws on RMI databases, customer engagements, and independent research to identify non-certified smelters and refiners or those at risk of benefitting armed groups in conflict-affected and high-risk areas, including the Covered Countries. In such events, Dell asks suppliers to remove the smelter or refiner in question from their supply chain.

This approach is enhanced by reviewing not only high-risk smelters and refiners, but also those that do not, or cannot, achieve RMAP-conformance. As a result, the relevant Dell procurement team helps engage the supplier to develop a program to address smelters or refiners of concern, including parts affected, material breakdown of parts, and timelines for completion. Progress is managed on a regular basis, with executive oversight on both sides, with regular briefings leading to potentially impacted scoring in Quarterly Business Reviews (QBRs). If the issue is not being resolved, further options may be considered, including changing suppliers.

To expedite such processes, there is a focus on ensuring that any data collection focuses on parts and suppliers directly in the supply chain for Dell products. We continue to review opportunities to improve surveying and reporting capabilities, with supplier collaboration of paramount importance to this process.

Step 4: Carry Out Independent Third-Party Audits of Supply Chain Due Diligence at Identified Points in the Supply Chain

As a downstream company, Dell uses RMAP for smelter and refiner audits to assess risks from the mine to the smelter or refiner and encourages participation, including removing from Dell's supply chain those unwilling to participate.

Based on consolidated CMRT information for the Reporting Period, there were 312 unique 3TG smelter or refiner facilities reported by Dell's suppliers, of which 257 are designated RMAP conformant under the methodology previously noted. Many suppliers returned CMRTs encompassing their entire supply chains, rather than scoped to include only components incorporated into Dell's Covered Products, indicating that not all smelters and refiners reported are providing material for Dell products. Dell publishes the full list of smelters and refiners reported by our suppliers in Appendix B.

The list of countries from which we believe 3TG in our Covered Products may have originated is published in Appendix A. Some 3TG also originates from recycled or scrap sources. This information was obtained using the Reasonable Country of Origin Inquiry (RCOI) report dated March 26, 2021 that is available to Dell as a member of RMI.

Step 5: Report on Supply Chain Due Diligence

This report and Dell's Form SD will be filed with the SEC and be publicly available at www.sec.gov and www.dell.com/supplychain.

Dell also provides information related to social and environmental responsibility on our website and in our annual Supply Chain Sustainability Progress Reports.

References to Dell's website are provided for convenience only, and its contents are not incorporated by reference into this report nor are they deemed filed with the SEC.

Continuous Improvement to Mitigate Risk

Dell is taking the following steps, among others, to continue to improve the due diligence conducted by it and to further mitigate any future risk of sourcing 3TG that benefits armed groups from the Covered Countries:

- 1) Continue to work closely with suppliers to obtain the necessary information on the origin of 3TG contained in the materials or components used in the Covered Products.
- 2) Work with smelters and refiners through our engagement with RMI to promote participation in RMAP and other equivalent third-party certifications.
- 3) Monitor incidents related to OECD Annex II risks to assess their impact on Dell's supply chain.

4) Continue partnering with organizations dedicated to supporting mining communities and contributing to ethical sourcing of minerals.

Cautionary Statement about Forward-Looking Statements

Statements in this report that relate to future events are forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934 and Section 27A of the Securities Act of 1933 and are based on Dell's current expectations. In some cases, you can identify these statements by such forward-looking words as "anticipate," "believe," "confidence," "could," "estimate," "expect," "guidance," "intend," "may," "objective," "outlook," "plan," "project," "possible," "potential," "should," "will" and "would," or similar words or expressions that refer to future events or outcomes. Dell's results or events in future periods could differ materially from those expressed or implied by these forward-looking statements because of risks, uncertainties, and other factors, including those risks described in its reports filed with the SEC, including Dell's Annual Report on Form 10-K for the fiscal year ended January 29, 2021, quarterly reports on Form 10-Q, and current reports on Form 8-K. These filings are available for review through the SEC's website at www.sec.gov. Any or all forward-looking statements Dell makes may turn out to be wrong and can be affected by inaccurate assumptions Dell might make or by known or unknown risks, uncertainties, and other factors, including those identified in this report. Accordingly, you should not place undue reliance on the forward-looking statements made in this report, which speak only as of its date. Dell does not undertake to update, and expressly disclaims any duty to update, its forward-looking statements, whether as a result of circumstances or events that arise after the date they are made, new information, or otherwise.

Appendix A: Reasonable Country of Origin Inquiry List

The following list identifies countries from which the minerals in Dell's products may have originated based on sourcing information disclosed during the RMAP's third-party auditing process and RMI's Reasonable Country of Origin Inquiry report dated March 26, 2021. The countries of origin of the 3TG processed by facilities listed in Appendix B are believed to be the following:

Argentina	Guinea	Russia
Australia	Guyana	Rwanda
Austria	India	Sierra Leone
Benin	Indonesia	South Africa
Bolivia	Japan	Spain
Brazil	Laos	Swaziland
Burundi	Madagascar	Taiwan
Canada	Malaysia	Tanzania
China	Mexico	Thailand
Colombia	Mongolia	Uganda
Congo, Democratic Republic of the	Mozambique	United Kingdom of Great Britain and Northern Ireland
Ecuador	Myanmar	United States of America
Eritrea	Namibia	Uzbekistan
Ethiopia	Niger	Venezuela
France	Nigeria	Vietnam
Germany	Peru	Zimbabwe
Ghana	Portugal	

Appendix B: Dell Smelter and Refiner List

This list is based on Dell supplier data for the Reporting Period. In many cases, suppliers provided information encompassing their entire supply chain; this information was not limited to facilities that contributed 3TG used only in Dell products. As a result, we are unable to confirm whether our products in fact contain 3TG from all of these sources. This list only includes facilities reported by suppliers that are on the RMAP standard smelter list as of March 26, 2021.
